

Welcome to ALEKS!

You are all set to start using ALEKS with your students. Go to [aleks.com](https://www.aleks.com) where you can view videos and get to know the program. This is also where you as well as your students will be able to log in.

I have included information on how to create a class, enrolling students and how to share a class if there is more than one teacher working with the student. Please make sure to enter ALL students into their grade level course. After they have mastered their own grade level you will be able to assign them the next level course. Make sure to use the initial courses listed below. As they reach higher level math be sure not to assign TX or CA courses. These are for other states and the standards may be a bit different.

Once students are assigned a course and take the Knowledge Check assessment you cannot reassign the license.

Grade 3----Mathematics – LV3 (with Quick tables)

Grade 4----Mathematics – LV4 (with Quick tables)

Grade 5----Mathematics – LV (with Quick tables)

Grade 6 - Middle School Math Course 1 / LV6

Grade 7 - Middle School Math Course 2

Grade 8 - Middle School Math Course 3

Once students log in please allow at least an hour of time for them to complete the knowledge check. This will identify where each individual student will start in the program.

If you have any questions regarding courses to use or anything relating to ALEKS feel free to contact me.

Thank you!
